***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 17-20, drawn to verifying that a host is authorized to use an IP address, classified in class 709, subclass 225.
- II. Claims 12-15 and 21, drawn to generating an IP address, classified in class 709, subclass 220.
- III. Claim 16, drawn to avoiding the duplication of IP addresses using a comparison, classified in class 709, subclass 224.
- IV. Claim 22, drawn to binding an IP address using a certificate and a private key, classified in class 709, subclass 229.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group I does not require the generation of an IP address as recited in group II. Group I simply utilizes an IP address. The subcombination has separate utility such as generating an IP address for a host.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group I does not require generating an interface identifier, sending a neighbor solicitation message, receiving a neighbor advertisement message, and combining the components. The subcombination has separate utility such as allowing the new host to

learn a public key such that the new host may safely assume that the host sending the advertisement has used the public key to generate its IP address.

Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as binding an IP address to a host. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

A telephone call was made to H. Warren Burnam, Jr. on 5/3/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
